

## Remanufactured Forklift Parts

Remanufactured Forklift Parts - Lift trucks are quite costly pieces of machinery in view of the fact that a brand new electric lift truck unit can cost anywhere from \$18,000 to \$25,000, for a five thousand pound machinery. What's more, some thousands of dollars will have to be invested in a battery charger and battery. A similar internal combustion forklift of the same lift capacity will cost slightly less and the diesel units which are capable of heavier lifting capacities could cost upwards of \$100,000. Reconditioned lift trucks are an option in order to save much cash as they cost less than half the price of new models.

Some people think they would face more maintenance problems if they acquire a reconditioned forklift and are leery of obtaining a used lift truck at a sale price. A properly reconditioned lift truck will function just along with a new one and whichever doubts of upkeep are unfounded. Although your lift will get heavy use, as long as you take good care of the machinery, it would serve all your requirements and likely save you a lot of money.

It is important to determine what the seller means by a reconditioned or refurbished lift truck when thinking about buying a second-hand forklift. Many businesses do a very good job reconditioning a model previous to selling it. This includes disassembling the lift truck, rebuilding the engine, sandblasting the lift and then reassembling the whole thing and finishing with a fresh coat of paint.

To meticulously rebuild a lift truck engine, a good business would firstly totally disassemble it. A heat cleaning system is then used to clean all of the parts. When this step has been finished, all of the parts are checked to see if they have any extensive wear, any defects or breakage. Certain parts like for instance cylinder heads, crankshafts, cylinder blocks and connecting rods are resized, reground and resurfaced if needed. Various parts like for instance nuts, bolts, gears and all that. are replaced or repaired as considered necessary.

When the overhaul has been done, the engine is rebuilt by hand. After being reassembled, a series of tests are applied to the working equipment so as to check all of the parts and make certain there are no leaks or problems. If any problems occur, the crucial changes are made.

There is no reason to be concerned about buying reconditioned forklifts from quality sellers. The process the machines go through to be rebuilt ensures the utmost reliability. Upkeep expenses could truly work out to be less since you will avoid the initial phase of higher maintenance projections that a brand new forklift has as it is broken in. By following routine repairs schedules and taking care of the machinery properly, a reconditioned forklift would serve you well.
