

## Carriage Rollers

Carriage Rollers - Specifically designed bearings known as carriage rollers are regularly seen on lift masts as they enable them to perform better within challenging environmental surroundings. The conventional lift mast is usually subject to frequent shocks, oscillations, static loads, and vibrations and high dynamics. This equipment is regularly exposed to environmental influences like dust, cold, heat, contamination, aggressive ambient air and moisture. Thus, the guidance arrangements of lift masts have to be specifically strong and have a certain high load carrying capability.

In order to help compete in many various environmental conditions, carriage rollers were designed for lots of lift masts. While having the ability to deal with a specifically high load carrying capacity, these bearings provided an economical operational security for the guidance arrangement of the lift masts.
